

WEDGE PLATFORM FORM FACTORS

Wedge Networks'™ line of products is a series of high performance Deep Content Inspection platforms that provides the next generation security infrastructure to detect, protect against, and control threats, information leaks, and allows future security functions to run on the network.

Hardware

Turnkey solutions built for the demands of Enterprise and Carrier networks with ease of management for SMBs and branch offices. Optimized for performance and reliability with easy deployment, simplified support. Each Wedge Hardware platform is purpose-built and specially tuned for use with the WedgeOS™ platform.

Virtual Machine

Easy to integrate. Quick to deploy. Use your existing infrastructure. Providing unlimited scalability, the Wedge VM™ offers fully integrated content security protection within your virtualized environment. With the Instant-On Wedge VM™ Trial program you can test and enhance your security today.

Wedge Cloud™ / Security as a Service

Wedge Cloud™

No hardware. No software. No upfront investment. Wedge Cloud™ offers complete content security with the least amount of management required and limitless scalability.

Security as a Service

Wedge Cloud™ platform as a turnkey self-hosted cloud security service for carriers and ISPs. A multi-tenant solution that allows simple management of premium services and provides additional revenue streams to ISPs and carriers.

Wedge Cloud Network Defense™ (as an NFV-S Instance)

Wedge Cloud Network Defense™

An infinitely scalable security services platform run in the cloud. This platform leverages Software Defined Networks for Security (SDN-S) and Network Functions Virtualization for Security (NFV-S) technology to embed security as a scalable, high performance service in today's cloud connected networks. By enforcing unified web, email and mobile security policy across all network traffic, all devices are protected - anytime, anywhere.

WedgeOS™ Form Factors

- Wedge Hardware Appliance
- Wedge Virtual Machine
- Wedge Cloud / SaaS
- Wedge Cloud Network Defense™ (as an NFV-S instance)

WedgeOS™

The WedgeOS™ platform provides the next generation security infrastructure to detect, protect against, and control threats, information leaks, and allows future security functions to run on the network.

Deep Content Inspection

Wedge's Deep Content Inspection technology, moves beyond the application layer to allow full access to all content passing through the network in real time. It uniquely provides the most depth in scanning without compromising performance, loading clients, and remaining completely transparent to network traffic.

Built-In, Market-Ready Security Services

Current security services available on the WedgeOS™ platform are already deployed in both operator and enterprise environments. These include:

- Anti-Malware
- Anti-Spam
- Data Loss Prevention
- URL Filtering
- Mobile Devices Security
- Educational Institution Security
- IDS / IPS
- Web Application Firewall
- Next Generation Firewall
- Advanced Persistent Threats

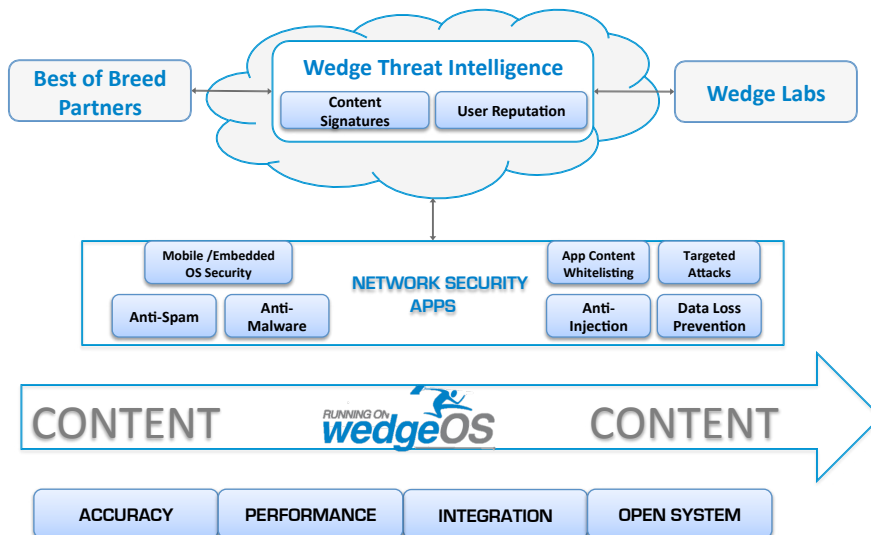

The Wedge Networks™ Family of Products

The WedgeOS™ Content Security platform is available in a variety of form factors depending on your network and capacity requirements.

DESCRIPTION	KEY MARKET	CAPACITY (CONCURRENT)
Wedge NDP-1005D	Small Businesses / Branch Offices	100 Users
Wedge NDP-1005T	Enterprises / SMBs	500 Users
Wedge NDP-1020T	Medium Enterprises	1,000 Users
Wedge NDP-1038T	Large Enterprises with need for reporting of security events	2,000 Users
Wedge NDP-2040T	Large Enterprises and Service Providers	5,000 Users
Wedge NDP-2080	Carriers, Telecom Companies and Internet Data Centers	50,000+ Users
Wedge NDP-2200	ISPs, Fixed Line & Mobile Operators, Social Media Providers, High Bandwidth / High User Environments	200,000+ Users
Wedge Virtual Machine	SMEs to ISPs	Host Dependant
Wedge Cloud	SMEs to ISPs	1 to Millions of Users
Wedge SaaS	Large Enterprise to ISPs	Deployment Dependant
Wedge Cloud Network Defense™ (as an NFV-S instance)	Mobile Users to SMEs to ISPs	1 to Millions of Users

Wedge Ecosystem

Wedge Networks™, Inc.

is transforming how network security is delivered. Its innovative Cloud Network Defense™ is a true cloud network security platform designed to deliver the elastic, embedded and comprehensive security that is required to combat the shifting threat landscape associated with today's cloud connected world. Unlike first generation security products, cloud-assisted appliances or even dedicated security clouds, Cloud Network Defense™ enables in-line inspection of both inbound and outbound traffic embedded within the cloud layer across all platforms and device types without latency. Wedge's products are deployed globally, delivering security protection for tens of millions of users in Fortune 500 companies, government agencies, Internet service providers, and across all industry verticals. Wedge Networks is headquartered in Calgary, Canada, and has international offices in Dallas, USA, Beijing, China, and Manama, Bahrain.
